## What is Claimed is

- 1. A porous film molded from a composition containing 25 to 55% by weight of polyolefinic resin and 75 to 45% by weight of inorganic filler, in which the polyolefinic resin comprises 98 to 70% by weight of linear low density polyethylene and 2 to 30% by weight of branched low density polyethylene, and contains 0.5 to 5 parts by weight of liquid ethylene- $\alpha$ -olefin oligomer based on 100 parts by weight of the composition.
- 2. A porous film as defined in claim 1, wherein the kinetic viscosity at  $40^{\circ}\text{C}$  of the ethylene- $\alpha$ -olefin oligomer is from 50 to 100000 mm<sup>2</sup>/sec.
- 3. A porous film as defined in claim 1, wherein the moisture permeability of the porous film is from 1500 to  $4000~g/m^2$  · 24 hr.
- 4. A porous film as defined in claim 1, wherein the uniformness of the thickness of the porous film is 0.15 or less.
- 5. A porous film as defined in claim 1, wherein the ratio  $(S_T/T_H)$  of the rigidity  $(S_T\colon mm)$  relative to the

thickness of the porous film  $(T_H : \mu m)$  is from 1.3 to 2.2.

- 6. A porous film as defined in claim 1, wherein the ratio  $(T_S/T_H)$  of the exudation start time  $(T_S:min)$  relative to the thickness of the porous film  $(T_H:\mu m)$  is at least 0.2 and the ratio  $(T_E/T_H)$  of exudation end time  $(T_E:min)$  relative to the thickness  $(T_H:\mu m)$  is at least 0.4.
- 7. A porous film as defined in claim 1, wherein the thickness of the porous film is from 10 to 300  $\mu m$ .
- A method of manufacturing a porous film as defined in any one of claims 1 to 7 of molding a film from composition containing 25 to 55% by weight of polyolefinic resin and 75 to 45% by weight of inorganic filler, and stretching the thus obtained film at least in the machine direction, which comprises using resin containing from 98 to 70% by weight of linear low density polyethylene and from 2 to 30% by weight of branched low density polyethylene as the polyolefinic resin, adding from 0.5 to 5 parts by weight of liquid ethylene- $\alpha$ -olefin oligomer based on 100 parts by weight of the composition and taking up the film while stretching at line speed at least of 100 m/min upon stretching in the machine direction.

9. A manufacturing method of a porous film as defined in claim 8, wherein the stretching factor at least in the machine direction is at least 1.2 times.
